See also: ACOG Guidelines: Management of Late-Term and Postterm Pregnancies. With the addition of umbilical artery Doppler velocimetry, particularly in the surveillance of fetal growth restriction (FGR), the contraction stress test (CST) is now rarely used to assess for fetal compromise or potential hypoxemia. There is no evidence that ...

ACOG Guidelines at a Glance: Antepartum fetal surveillance ...

A score of 8-10 is reassuring. A score of 6 is equivocal (neither reassuring nor nonreassuring). If you have an equivocal score, depending on how far along you are in your pregnancy, you may have another BPP within the next 12-24 hours, or it may be decided to deliver the baby.

Special Tests for Monitoring Fetal Well-Being | ACOG

Indicated fetal growth restriction surveillance
Ultrasound-estimated fetal weight within 30 days of delivery
Hadlock intrauterine growth curve
Small for gestational age (SGA): Birth weight <10 th percentile based on a recent, sex-specific curve

RCOG or ACOG for Predicting Small for Gestational Age ...

ABSTRACT: Fetal growth restriction, also known as intrauterine growth restriction, is a common complication of pregnancy that has been associated with a variety of adverse perinatal outcomes. There is a lack of consensus regarding terminology, etiology, and diagnostic criteria for fetal growth restriction, with uncertainty surrounding the optimal management and timing of delivery for the ...

Fetal Growth Restriction | ACOG

The corresponding frequency for patients with complications (eg, fetal growth restriction, preeclampsia) is approximately every 15 minutes in the first stage of labor and every 5 minutes during the second stage. Health care providers should periodically document that they have reviewed the tracing.

ACOG PRACTICE BULLETIN

American College of Obstetricians and Gynecologists (ACOG) 2013, U.S. 1 Preeclampsia must include 1 of the following : SBP \geq 140 mm Hg or DBP \geq 90 mm Hg on 2 occasions >4 hours apart after 20 weeks' gestation in a previously normotensive woman

Practice Bulletin No. 134: Fetal Growth Restriction ...

Note : In this document, the term fetal growth restriction will be used to describe fetuses with an estimated fetal weight that is less than the 10th percentile for gestational age, whereas the term small for gestational age (SGA) will be used exclusively to describe newborns whose birth weight is less than the 10th percentile for gestational age.

Fetal growth restriction Clinical Practice Guidelines

The task force agreed that hospitalization for maternal and fetal surveillance is resource intensive and should be considered as a priority for research and future recommendations. For women with preeclampsia without severe features, use of ultrasonography to assess fetal growth and antenatal testing to assess fetal status is suggested.

Hypertension in Pregnancy: Executive Summary : Obstetrics ...

CLINICAL PRACTICE GUIDELINE FETAL GROWTH RESTRICTION 5 1.20 In cases of isolated FGR (EFW

<10thcentile and normal UA Doppler), delivery can be delayed until at least 37 weeks, and even until 38-39 weeks gestation.

CLINICAL PRACTICE GUIDELINE FETAL GROWTH RESTRICTION ...

Traditionally, it has been defined as <10 th percentile weight for gestational age on a singleton growth curve, as this establishes the diagnosis as being small for gestational age (SGA). In our practice, when a fetus <10 th percentile weight for gestational age is identified, we monitor fetal growth and fetal physiology over time.
