You'll be able to download the books at Project Gutenberg as MOBI, EPUB, or PDF files for your Kindle.

## **Business Intelligence Analytics And Data**

Data analytics is a data science. If business intelligence is the decision making phase, then data analytics is the process of asking questions. Organizations deploy analytics software when they want to try and forecast what will happen in the future, whereas BI tools help to transform those forecasts and predictive models into common language.

Business intelligence includes data analytics and business analytics, but uses them only as parts of the whole process. BI helps users draw conclusions from data analysis. Data scientists dig into the specifics of data, using advanced statistics and predictive analytics to discover patterns and forecast future patterns.

## **Business intelligence: what it is and why it matters**

Business intelligence data is typically stored in a data warehouse or in smaller data marts that hold subsets of a company's information. In addition, Hadoop systems are used within BI architectures as repositories or landing pads for BI and analytics data; especially for unstructured data, log files, sensor data and other types of big data.
