16-1 Genes and Variation

- As Darwin developed his theory of evolution, he worked under a serious handicap
- He didn't know how heredity worked
- This lack of knowledge left two big gaps in Darwin's thinking

biology chapter 16 evolution populations Flashcards and ...

The process of evolution occurs only in
populations and not in individuals. A
single individual cannot evolve alone;
evolution is the process of changing the
gene frequencies within a gene pool.
Five forces can cause genetic variation
and evolution in a population: mutations,
natural selection, genetic drift, genetic
hitchhiking, and gene flow.
