Hedging is a risk management strategy employed to offset losses in investments by taking an opposite position in a related asset. The reduction in risk provided by hedging also typically results in...

A Beginner's Guide to Hedging - Investopedia

What is hedging in trading? A hedge is an investment position that is opened in order to offset potential losses of another investment. Think of hedging as an insurance on an investment: if an investor is hedged in the event of a sudden price reversal, then the ramifications are dampened.

What is hedging in trading?

Conversely to the commodity option seller, an option buyer views the position as an asset (not a liability) until it is sold or expires. This is because any long option held in a commodity trading account has the potential to provide a return to the trader, even if that potential is small.
