consider a matrix G of size $(n + 1) \times (n + 1)$ partitioned into a leading matrix G_{11} of size $n \times n$. $G = \begin{bmatrix} G_{11} & h \\ 0 & t \end{bmatrix}$ $h = [g_{n+1,1} \dots g_{n+1,n+1}]$. Now by expanding the determinant of G along its last column we see that $|G| = |G_{11}|g_{n+1,n+1} - \sum_{i=1}^n h_{ii} |G_{11}^{(i)}|$, proving by induction that the determinant of a triangular matrix is equal to the product of its diagonal elements.
