The Goals of Environmental Science One of the major goals of environmental science is to understand and solve environmental problems. To accomplish this goal, environmental scientists study two main types of interactions between humans and their environment. One area of study focuses on how we use natural resources, such as water and plants.

Some environmental changes are caused by people. Others happen naturally. No matter how they happen, though, environmental changes can cause populations to change. ADAPTATION TO HUNTING Hunting is one of the factors that can affect the survival of animals. In Africa, people hunt male elephants for their tusks, which are made of ivory. Because ...

CHAPTER 7 SECTION 3 Natural Selection in Action

Environmental psychology examines the dynamic transactions between people and their everyday, sociophysical environments. Whereas many areas of psychological research (e.g., those rooted in theories of learning, perception, and social influence) are fundamentally concerned with relationships between environmental factors, intrapersonal processes, and behavior, environmental psychology is ...
