Now let's add a fancy bounce animation to the loginButton. Add a fourth call to our BFF, the animations API, but this time, pick the one with usingSpringWithDamping: and initialSpringVelocity: parameters. Give it a duration of 1.0, 0.4 damping, an initial velocity of 10, an empty set for the options parameter, and a nil for the completion.

Constraint Animations on iOS Apps using XCode and Swift ...

When we attach the modifier .animation(.default) to a view, SwiftUI will automatically animate any changes that happen to that view using whatever is the default system animation. In practice, that is an “ease in, ease out” animation, which means iOS will start the animation slow, make it pick up speed, then slow down as it approaches its end.
