Testing a REST API requires a client that consumes the REST API, users can then use the client to expose the particular HTTP method. In this post, I am presenting three tools using which one can Test the Rest API manually. These are Advanced Rest Client, Postman-Rest Client and Curl in Linux.

Rest API Manual Testing Tools

The manual service record is moved from the Manual Services [cmdb_ci_service_manual] table to the Mapped Application Service [cmdb_ci_service_discovered] table by changing the record class. All the original manual service attributes, such as, name, owner, and operational status, are retained in the application service .
