Meiosis Identifying Processes Answers
There are two stages or phases of meiosis: meiosis I and meiosis II. Before a dividing cell enters meiosis, it undergoes a period of growth called interphase. At the end of the meiotic process, four daughter cells are produced. G1 phase: The period prior to the synthesis of DNA.

Meiosis Answer Key Identifying Processes

MEIOSIS AND MITOSIS ANSWERS 1. A gene is a biological unit of genetic information which is located in a definite position or locus on a filamentous or rod-shaped chromosome contained in the nucleus. 2. As an organism grows or repairs damaged tissue, new cells are being produced by mitosis. When gametes are being formed, the process is termed meiosis. 3.

Meiosis is the process of cell division that halves the chromosome number and makes gametes (human gametes contain 23 chromosomes). This ensures that at fertilisation the number of chromosomes found in normal body cells - the diploid number - is restored. Meiosis involves two divisions of the nucleus:
