Memory distortion is dramatically exemplified by Schacter in a simple experiment. Pay attention to the following series of words: candy, sour, sugar, bitter, good, taste, tooth, nice, honey, soda, chocolate, heart, cake, eat, and pie. After looking at the list, turn away and write down all the words you can remember from the list.

book review -Searching for Memory by Daniel Schacter - The ...

Memory is the faculty of the brain by which data or information is encoded, stored, and retrieved when needed. It is the retention of information over time for the purpose of influencing future action. If past events could not be remembered, it would be impossible for language, relationships, or personal identity to develop. Memory loss is usually described as forgetfulness or amnesia.
