For an introduction to Java-based configuration of the Spring container, see JavaConfig in the Spring reference documentation. A sample configuration to enable Spring Data repositories resembles the following: Example 27. Sample annotation-based repository configuration

Spring Data JPA - Reference Documentation
This first part of the reference documentation is a high-level overview of Spring for Apache Kafka and the underlying concepts and some code snippets that can help you get up and running as quickly as possible.

Spring for Apache Kafka
Spring Batch provides an AOP interceptor that wraps a method call in a RepeatOperations object for just this purpose. The RepeatOperationsInterceptor executes the intercepted method and repeats according to the CompletionPolicy in the provided RepeatTemplate.

Repeat - Spring
Spring Batch is a lightweight, comprehensive batch framework designed to enable the development of robust batch applications vital for the daily operations of enterprise systems.

Spring Batch - Reference Documentation
The first way is to set certain properties, the second way is to add certain components to the ApplicationContext. Let's take a look at the available properties first. Note that these are only the properties of batch-web-spring-boot-starter, there are more properties from Spring Boot described in the Spring Boot reference documentation.

Batch Web Spring Boot Starter Reference Guide
1. Unit Testing. As with other application styles, it is extremely important to unit test any code written as part of a batch job. The Spring core documentation covers how to unit and integration test with Spring in great detail, so it is not be repeated here. It is important, however, to think about how to 'end to end' test a batch job, which is what this chapter covers.

Unit Testing - Spring
As described in earlier, the JobRepository is used for basic CRUD operations of the various persisted domain objects within Spring Batch, such as JobExecution and StepExecution. It is required by many of the major framework features, such as the JobLauncher, Job, and Step. When using java configuration, a JobRepository is provided for you.

Configuring and Running a Job
Spring Boot makes it easy to create stand-alone, production-grade Spring based Applications that you can "just run". We take an opinionated view of the Spring platform and third-party libraries so you can get started with minimum fuss.
