Population projections are estimates of the population for future dates. They are typically based on an estimated population consistent with the most recent decennial census and are produced using the cohort-component method.

Population Projections - The United States Census Bureau

This book focuses on the methodology and analysis of state and local population projections. It describes the most commonly used data sources and application techniques within each of three classes of projection methods (cohort-component, trend extrapolation, and structural models) and covers the components of population growth, the formation of assumptions, the development of evaluation ...

The Texas Demographic Center produces annual estimates of the population of Texas, its counties, and places. This brief summarizes our 2018 population estimates and includes: the estimated population of counties and places, the components of population change by county and county characteristics, and demographic shifts in age distribution and race/ethnicity composition.

TDC - Texas Population Estimates Program

The 500 Cities project is a collaboration between CDC, the Robert Wood Johnson Foundation, and the CDC Foundation. The purpose of the 500 Cities Project is to provide city- and census tract-level small area estimates for chronic disease risk factors, health outcomes, and clinical preventive service use for the largest 500 cities in the United States.
